C; Comment: This plasma protein binds mannose and N-acetylglucosamine and can activate
C; Comment: The molecule consists of approximately 20 identical chains linked by disul.
C; Comment: The molecule consists of approximately 20 identical chains linked by disul.
C; Comment: The molecule consists of approximately 20 identical chains linked by disul.
C; Comment: The molecule consists of approximately 20 identical chains linked by disul.
C; Superfamily: mannose-binding lectin; C-type lectin homology
C; Keywords: acute phase; calcium; hydroxylysine; hydroxyproline; lectin; liver; plasm—
F; 11-230, Product: mannose-binding lectin A #status experimental < MAT>
F; 36-88 / Region: callagen-like
F; 85-88 / Region: callatechment (R-G-D) motif
F; 118-234 / Domain: C-type lectin homology < LCH>
F; 61,67,73 / Modified site: lysine derivative (Lys) (probably 5-hydroxylysine) #status experimental
F; 79,82 / Modified site: lysine derivative (Lys) (probably 5-hydroxylysine)
                                                                               mannose-binding lectin A precursor - rat
NiAlternate names: serum mannan-binding protein
Cispecies: Rattus norvegicus (Norway rat)
Cibate: 31-Dec-1990 #sequence_revision 31-Dec-1990 #text_change 22-Jun-1999
CiAccession: B24791; A29556; A27799

A.Title: HTF: A b-zip transcription factor that is closely related to the human XBP/T A; Reference number: 3C4857
A; Accession: JC4857
A; Accession: JC4857
A; Molecule type: mRNA
A; Residues: 1-267 < KIS>
C; Comment: This is a basic-leucine zipper type transcription factor involved in hepat...
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Strongery Strong Strong

A/GrossTereleces: Gub.11904V, Valin.10010V
A/Hap position: 17q23-17q23
C.Function:
A.Map position: 2atalyzes the hydrolysis of dipeptides from the carboxyl end of polypc A.Description: catalyzes the hydrolysis of dipeptides from the carboxyl end of polypc A.Description: alone in the control of blood pressure by catalyzing the conversion of C.Superfamily: mammalian peptidyl-dipeptidase A.C.Steperfamily: alternative splicing; blood pressure control; glycoprotein; kidney; lung, F.1-29/Domain: signal sequence #status predicted <SIGS
F:30-1306/Product: peptidyl dipeptidase I #status predicted <ARN>
F:30-1376/Domain: transmembrane #status predicted <FRNS
F:380,344/Binding site: zinc (His) #status predicted
F:390,344/Binding site: zinc, catalytic (His, His, Glu) #status predicted
F:389/Active site: Glu #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        apolipoprotein C-II precursor - guinea pig

A;Title: Complete Genomic Sequence of the Filamentous Nitrogen-fixing Cyanobacterium Ana
A;Reference number: AB1807; MUID:21595285; PMID:11759840
                                                                                                                                                          A; Molecule type: nucleic acid
A; Residues: 1-492 < LEF>
A; Residues: 1-492 < LEF>
A; Note: sequence extracted from NCBI backbone (NCBIP:117216)
C; Superfamily: interstitial collagenase: hemopexin repeat homology; matrix metalloproteinase; zinc; zymogen
C; Keywords: hydrolase; metalloproteinase; zinc; zymogen
F; 52-262/Domain: matrix metalloproteinase homology < LAMP>
F; 84, 219, 223, 229/Binding site: zinc, catalytic (Cys, His, His, His) (inhibited) #status
F; 219, 223, 229/Binding site: zinc, catalytic (His) (active) #status predicted
F; 220/Active site: Glu #status predicted

Sequence 17, Application US/08339152A
Patent No. 5643726
GENERAL INFORMATION:
APPLICANT: Tanzi, Rudolph E.
APPLICANT: Kovacs, Dora M.
TITLE OF INVENTION: Methods For Modulating Transcription
TITLE OF INVENTION: From The Amyloid -Protein Precursor (APP) Promoter NUMBER OF SEQUENCES: 33
CORRESPONDENCE ADDRESS: 33
ADDRESSE: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.
STREET: 1100 New York Ave., NW, Suite 600
CITY: Washington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
